Sara Delamont	*A paradigm shift in research on science education?*
J. Myron Atkin	*Research and reform in science education: a dilemma?*
Guy Claxton	*Science lessens?*
A. M. Lucas	*Processes of science and processes of learning*

STUDIES IN SCIENCE EDUCATION
is an international review of research for all who are interested in the educational dimensions of science. It is not intended to compete with existing journals, but to complement them by providing reviews of research on specific aspects of science education and by drawing together, in analytical surveys, recent contributions which may be published in widely scattered sources. Its editorial policy is to encourage work which reflects a wide variety of viewpoints, including those of administration, anthropology, curriculum, history, linguistics, philosophy, politics, psychology and sociology.
